# report on computer virus

## report on computer virus pdf

A computer virus is a type of malicious software that, when executed, replicates itself by modifying other computer programs and inserting its own code. When this replication succeeds, the affected areas are then said to be "infected" with a computer virus.

## Computer virus - Wikipedia

Frequently Asked Questions. What is a virus? A computer virus is a program that spreads by first infecting files or the system areas of a computer or network router's hard drive and then making copies of itself.

## Virus Basics | US-CERT

The Michelangelo virus is a computer virus first discovered on 4 February 1991 in Australia. The virus was designed to infect DOS systems, but did not engage the operating system or make any OS calls.
